About me

Backend Developer with a strong interest in building reliable, secure, and maintainable backend systems. I enjoy turning business requirements into practical software solutions, focusing on clear system design, clean implementation, and long-term scalability. Through academic projects, internship experience, and personal product development, I have developed a problem-solving mindset and the ability to learn quickly, work with complex workflows, and deliver backend features that support real user needs. reliability.

Technical Stack

Languages: Java, SQL
Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate/JPA
Data: SQL Server

Projects

Horse Racing Tournament Management System (HRTMS) **May 2026 – July 2026**
Backend Developer | GitHub Repository

- Built a **Spring Boot** backend for a horse racing tournament management system, exposing **136 REST endpoints** across **24 controllers** and **25 JPA entities**.
- Implemented core workflows for tournaments, races, race formats, horse registration, jockey invitations, referee assignments, doctor health checks, official results, predictions, wallets, and transactions.
- Developed **JWT-based authentication** with email OTP verification, account activation, login, logout, forgot-password, and reset-password flows for multiple user roles including admin, horse owner, jockey, doctor, referee, and spectator.
- Designed transaction-safe race operations including batch race creation, schedule conflict validation, race start/cancel/update flows, late scratch, disqualification, walk-over handling, prediction locking, refund processing, and official result retrieval.
- Integrated notification workflows for jockey invitations, admin registration review, doctor invitations, referee invitations, race updates, health-check outcomes, prediction refunds, and role-specific notification inboxes.
- Added scheduled jobs to expire unanswered jockey and doctor invitations, reset workflow states, and notify affected users through database-backed notification records.

Technologies: *Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate/JPA, SQL Server, JWT, Maven, Lombok, Spring Mail, SpringDoc OpenAPI*

Education

FPT University **Sep 2023 – Expected Oct 2027**
Bachelor of Software Engineering *GPA: 2.9/4.0*
